- Programming development So long as read-write may realize the DNS analysis to in ACCESS/MSSQL database SOA and the RR table.
- Dying machine examination May to join tabulates to the dying machine examination the machine to carry on the dying machine examination. When discovered when the server does not pass, then automatically DNS analysis to another machine. Guaranteed your customer all can visit the normal server as necessary.
- Load equalization May to join to the load equalization machine establishment weight. The system automatically compares according to the weight regularly analyzes the visit proportion.

Requirements: .NET Framework 2.0 Limitations: Supports 10,000 Analysis records, one year life WinMyDNS Homepage: WinMyDNS - Intelligent DNS Analysis - Powerful Stats to optimize Server Loads | WinMyDNS WinMyDNS is a Windows-based

## What's New in the WinMyDNS?

Currently and WinMyDNS application only features Windows platform. WinMyDNS utility is suitable for companies which all customers, in order to control the DNS of its own company, must have the same DNS management capabilities as other DNS management tools. WinMyDNS can help you manage DNS more effectively. DNS management software can help you decide between the various DNS tools, and also helps you plan the data that needs to be created or updated. It is equally important for others to understand the DNS, which is why we will provide a roadmap to the other DNS management tools. The objectives of this software are as follows:

- DNS Automation application consists of the recording, the record management and the usage of DNS API to the server. The DNS data are cleared in a round-robin fashion.
- DNS analysis application consist of an analysis, which is a kind of regular data purification, and makes results of the analysis available in an Oracle SQL database.
- WND Management This software helps you to analyze the records (DNS Managed Objects (MO)) in the Oracle SQL Database as a database. If you want to analyze the DNS data and store them in the SQL database, this software is a must.
- DNS Managed Objects (MO) This software lets you analyze DNS records in the SQL database. The MO type is string and it is treated as a kind of database in the SQL database.
- DNS DNS based discovery software is a software that can evaluate the DNS data in the SQL database, and change the DNS data in the use of the DNS. As a result, the host-name is changed in the DNS record (DNSMO), which will be inserted into the server.
- DNS DNS testing: The DNS testing is a software that can change the DNS data in the database directly, and makes direct changes in the Microsoft DNS, and changes the data in the Microsoft DNS.
- DNS DNS management Software that is specific to Windows, our software is designed to allow you to manage DNS from within Windows. With our application, you can manage the DNS as well as change it.
- WinMyDNS is a software that can be installed on a Windows NT Server. It uses the Microsoft Windows DNS class for the DNS management.
- WinMyDNS is a handy network management and analysis tool for the server. WinMyDNS provides an easy way to control DNS data. This enables the administrator to control the DNS data directly in
