Price: $69.99 * We tried to use as much Free Software as possible to obtain the results. If you feel that the image is used in violation of the licence, please let us know by providing a link to the image and details of where the image was obtained. How do you transfer music to an iPod? Modern iPods, such as the 6th generation iPod, are without a doubt the most portable music players available nowadays. This however does not mean that you can put them into your pocket and expect them to work seamlessly with any computer. In order to be able to work on them conveniently, you need to switch them on and off, connect them via their dedicated USB cable and play them back through your computer or simply wait for them to charge in your hand. So, it is vital to get to grips with iTunes at some stage and learn how to sync your iPod with your computer. You can make use of software that will allow you to perform this task with greater ease. One such utility is iPodTrans Pro which can be used to transfer music from your computer to your iPod or from one to the other. This freeware comes with some rather useful features, such as managing playlists and collections, copying songs to your iPod and even to iTunes, as well as the copying of entire albums to your device from your iTunes library. The software can be installed without any issues, provided you have.NET Framework 4.0 and iTunes already on your computer. Once that is done, you simply need to connect your iPod device to the computer and open iTunes. You will then be able to explore your iPod and look at the various playlist and albums you can manage through it. With its help, you can also move files from one playlist to another, or even remove an item from a playlist, as simply right-clicking any song will reveal the additional functions. Moving files from your computer to your iPod can be done with great ease by using PodTrans Pro. You simply need to add the desired tracks, albums, podcasts or audio books to your list and then click the "Copy" button. After that, you simply need to connect

What's New In PodTrans Pro?

You can backup your iPod in two ways: using iTunes or with a third-party application. If you prefer to rely on a utility that was developed especially for this purpose, such an app is PodTrans Pro. Your iPod is connected to your computer via its dedicated USB port, and when you launch the app, you will be given access to its contents. As previously mentioned, you can browse and view the data on your iPod device and preview its available space. If you wish to do something specific with the data on your device, you can connect your iPod to iTunes or transfer its content to another device. Apart from transferring the data on your iPod to your hard disk, you can also back them up, in case you want to quickly restore all the data. PodTrans Pro, like all similar apps, should be kept on your computer when you use it regularly. You will not run into any issues if you are connected to a Wi-Fi network, but if you are on the road, it is wise to have a wired connection. Also, you might want to make sure your iTunes and.NET Framework 4.0 are already installed on your computer. If you already have iTunes and.NET Framework 4.0 on your computer, you can just download and install PodTrans Pro from their official website. Let's see how it works. The app is simple to use. You can either pull up the files on your device and select them one by one, or add all the tracks in one go by pressing the Add all button. You can also choose what folder you want the data to be saved into. PodTrans Pro shows you the progress, so there is no need for any timers. You can export the files you chose to your hard disk, iTunes or another iPod if you have one. If you are using iPod Touch, you will be able to access its music library, but it is not possible to back up your device. If you want to, you can choose to copy the audio tracks to the database, which will then be saved on your hard disk. In the Clipboard section, you will be able to copy tracks and playlists you want to move from one iPod to the other. Right-clicking a song will give you additional options, such as editing the ID3 tag, renaming it and moving it to a different playlist. You will find several other options, such as moving and renaming files, changing the iPod's display language, printing
